You need energy to make matter change. The blowing wind, the warm Sun and a falling leaf are all examples of energy in use. Energy makes motion and change possible. There are two basic types of energy, kinetic and potential. Kinetic energy is being used as an object is in motion. Potential energy is in storage just waiting to be used. Many things start out having potential energy, and then once they begin to move, the energy becomes kinetic.

**Forms of Energy—Ms. Jefferson's 5th Grade Science Class**

These foldables will help your students understand and identify 6 forms of energy (mechanical, electrical, sound, light, thermal, chemical). I also included foldables with 5 forms of energy (mechanical, electrical, sound, light, thermal).\*\*\*\*\*

**Forms Of Energy-5th Grade Worksheets & Teaching Resources**

Energy makes living things grow. Energy also makes machines work. Energy can take a wide variety of forms – light energy, electrical energy, heat energy, sound energy, mechanical energy, chemical energy, nuclear or atomic energy and so on. All these forms of energy can be described as either potential energy or kinetic energy.
