Raised Round Module: The ArtCAM Express Raised Round Module is ideal for foil and embossing dies with lettering as it generates engraving toolpaths directly from the vector artwork. Determining the optimum height and shape, this strategy enables you to create a tapered edge to the letter design so that there are no sharp edges that would otherwise pierce through the material.

This volume comprises select proceedings of the 7th International and 28th All India Manufacturing Technology, Design and Research conference 2018 (AIMTDR 2018). The papers in this volume focus on forming and machining, and discuss both conventional technologies and the latest developments and innovations, including both experimental studies and simulations; while those on automation present the latest research on hardware as well as software aspects. This volume will be of interest to researchers, and practicing engineers alike.

This is a textbook for use in technology teacher training and also a reference book for technology teachers. It will provide a foundation for new teachers entering the area of technology, and also the opportunity for practicing teachers to keep up to date with research informed ideas about teaching technology. Technology in the curriculum has continually faced a range of challenges throughout its history in many countries. Often the basis of the challenges is the result of a lack of understanding about good technology practice. It is hoped that this book can encourage excellent practice in technology teaching and so increase the number of schools positively engaged with technology. The chapter authors are internationally respected and experienced educators who have been able to draw on both their teaching experience and their research in order to discuss a range of aspects of teaching technology. The book has been developed with an international audience in mind. While authors are naturally most familiar with their own country, efforts have been made to generalize from the principles of sound theory and research based practice to maximize applicability to local contexts. John Williams is the Director of the Technology, Environmental, Mathematics and Science Education Research Centre at the University of Waikato in New Zealand. He has worked as a designer and builder, and began his career as a secondary school Manual Arts teacher. He has taught and studied in Australia and the USA, and in a number of African and Indian Ocean countries. He has published and presented widely, and enjoys fishing.

Renowned author, Lora S. Irish, shares her secrets on creating stunning pyrography. Inside you'll find techniques, patterns, projects, and gallery.

This book presents the select proceedings of the International Conference on Recent Advances in Manufacturing (RAM 2020). This volume, in particular, provides insights into current research trends and opportunities within the manufacturing processes domain such as conventional and unconventional manufacturing, micro and nano manufacturing, chemical and biochemical manufacturing, and computer-integrated manufacturing (CIM). The topics covered include emerging areas of the fourth industrial revolution such as additive manufacturing, sustainable and energy-efficient manufacturing, smart manufacturing, artificial intelligence in manufacturing application, and computer-integrated manufacturing. This book will be useful for to researchers and practitioners alike.

Engineering Mechanics: Combined Statics & Dynamics, Twelfth Edition is ideal for civil and mechanical engineering professionals. In his substantial revision of Engineering Mechanics, R.C. Hibbeler empowers students to succeed in the whole learning experience. Hibbeler achieves this by calling on his everyday classroom experience and his knowledge of how students learn inside and outside of lecture. In addition to over 50% new homework problems, the twelfth edition introduces the new elements of Conceptual Problems, Fundamental Problems and MasteringEngineering, the most technologically advanced online tutorial and homework system.

Expanded and updated color edition of Glenn Vilppu's famous Vilppu Drawing Manual, a book that takes you through drawing the human figure step-by-step, from gesture to construction, anatomy and light, teaching you to analyze and understand what you are seeing rather than copying. This gives you skills to bring your drawings to life whether done from the model or imagination. This is the foundation of the courses he teaches at Studios and Universities worldwide as well as his online school vilppuacademy.com
