Starting the war with only 35 aircraft, Austro-Hungarian industry went on to produce only moderate numbers of poor quality aircraft. The fliers of the Austro-Hungarian Empire operating on the Serbian and Russian fronts were fortunate at first, finding themselves faced by small numbers of aircraft yet more obsolescent than their own. Serbia fell in 1915, but when Italy declared war the Austro-Hungarians were still faced with a two-front war – a static front against Italy, and a far more fluid one against Russia. Austro-Hungarian fighter pilots performed bravely and often very effectively under extremely difficult geographic, climatic and operational conditions.

"Military Aircraft, Origins to 1918: An Illustrated History of Their Impact" is a detailed, authoritative exploration of the role and development of military aviation, from its beginnings to the conclusion of World War I. Military history scholar Justin Murphy carefully illustrates the impact of aircraft on military warfare, examines the different types of aircraft, and includes a wealth of photographs and descriptions. Organized thematically, the work covers everything from the origins of military aviation and the impact of aircraft on World War I to the role of reconnaissance missions, auxiliary aircraft, fighters, and bombers. Each chapter highlights key individuals, advancements in aviation technology, industrial organization and aircraft production, and the influence of aircraft on military tactics and strategy. Murphy also demonstrates how aircraft contributed to the development of total war and blurred the lines that had traditionally separated combatants and noncombatants.
