CCTV - 3rd Edition

CCTV pictures all begin when light or infrared (IR) hits the camera's sensor. IR is the same as light but its longer wavelength is outside our eyes' range so we call it invisible. Cameras, however, generally can see both. Let's begin with the eye-friendly visible stuff.

CCTV Lighting Guide - IFSEC Global

A CCTV system serves mainly as a security force multiplier, providing surveillance for a larger area, more of the time, than would be feasible with security personnel alone. CCTV systems are often used to support comprehensive security systems by incorporating video coverage and security alarms for barriers, intrusion detection, and access control.

CCTV Technology Handbook - Homeland Security

With colour cameras 1/3 of the chip collects red light, 1/3 of the chip collects green light and 1/3 of the chip collects blue light and these images are overlapped. The result is that only 1/3 of the available chip size is capturing each type of light. With a monochrome camera the full sensor captures the light.
