Deadly Medicines and Organised Crime: How Big Pharma Has Corrupted Healthcare is a book by Peter C. Gøtzsche with forewords by Richard Smith and Drummond Rennie. It was published by Taylor & Francis in 2013. The book documents activities by major pharmaceutical companies that include corruption, fraud, bribery, and omission of data to market their products. While all drugs have side effects not all have benefits. The influx of money by pharma undercuts regulation, education, and scientific ...

This title exposes the pharmaceutical industries and their charade of fraudulent behaviour, both in research and marketing where the morally repugnant disregard for human lives is the norm.

Pharmaceutical medicine is very, very big business. The top ten players earned more than \$200 billion in 2003. One drug, Pfizer's cholesterol pill Lipitor, had sales of more than \$9 billion. This kind of money buys an awful lot of friends among doctors and

politicians. Most of those involved in the formulation of public health policy seems happy with the present system. The trouble is that the public is starting to have doubts. There is a growing sense that the vast profits of drug companies and their control of the research agenda might not be that good for our health. Jacky Law takes the reader on a journey through the pharmaceutical business and shows how the public is quite right to be concerned about conventional medicine, as it has developed since the late 1970s. She tells a story of spectacular regulatory failure, phenomenally high prices, betrayal of the public interest and a growing awareness among ordinary people that things could be very different. Sophisticated marketing and public relations, not scientific excellence, have helped corporations to preside unchallenged over matters of life and death. It is time, Law argues, for us to take responsibility for our health, not as passive

Corrupted Healthcare

DEADLY PSYCHIATRY AND ORGANISED DENIAL explains in evidence-based detail why the way we currently use psychiatric drugs does far more harm than good. Professor, Doctor of Medical Science, Peter C. Gøtzsche documents that psychiatric drugs kill more than half a million people every year among those aged 65 and above in the United States and Europe. This makes psychiatric drugs the third leading cause of death, after heart disease and cancer. Gøtzsche explains that we could reduce our current usage of psychotropic drugs by 98% and at the same time improve patients' mental and physical health and survival. It can be difficult, however, to come off the drugs, as many people become dependent on them. As the withdrawal symptoms can be severe, long-

lasting and even dangerous, slow tapering is usually necessary. In his book, G ø tzsche debunks the many myths that leading psychiatrists - very often on drug industry payroll - have created and nurtured over decades in order to conceal the fact that biological psychiatry has generally been a failure. Biological psychiatry sees drugs as the "solution" for virtually all problems, in marked contrast to the patients' views. Most patients don't respond to the drugs they receive but, unfortunately, the psychiatrists' frustrations over the lack of progress often lead to more diagnoses, more drugs and higher doses, harming the patients further.

Professor Peter C. G ø tzsche co-founded the Cochrane Collaboration in 1993 and has become one of the most respected academics of his time. His career has

exposed malfeasance in the pharmaceutical industry, human clinical trials and drug regulatory agencies, empowering Cochrane to evolve into one of the world ' s most trusted scientific institutions. However, in September 2018, he was unceremoniously expelled after what can only be described as a show trial that left the rest of the world wondering what happened. G ø tzsche fought to uphold Cochrane ' s original values of transparency, rigorous science, free scientific debates, and collaboration. But instead of maintaining scientific integrity, Cochrane ' s leadership had become consumed with managing the charity like a business, promoting its brand and products and demanding the censorship of dissenting views. For the first time, G ø tzsche pulls back the covers on this unscrupulous process, giving us all access to secret recordings, which reveal how his own organisation betrayed him and mislead

millions of people after Cochrane cowered to the threats and intimidation from his critics. This is the fascinating story about institutional corruption in one of the world ' s most venerated charities, which ultimately led to the worst show trial in academia you can imagine.

This searing indictment, David Healy ' s most comprehensive and forceful argument against the pharmaceuticalization of medicine, tackles problems in health care that are leading to a growing number of deaths and disabilities. Healy, who was the first to draw attention to the now well-publicized suicide-inducing side effects of many anti-depressants, attributes our current state of affairs to three key factors: product rather than process patents on drugs, the classification of certain drugs as prescription-only, and industry-controlled drug trials. These developments have tied

the survival of pharmaceutical companies to the development of blockbuster drugs, so that they must overhype benefits and deny real hazards. Healy further explains why these trends have basically ended the possibility of universal health care in the United States and elsewhere around the world. He concludes with suggestions for reform of our currently corrupted evidence-based medical system.

Argues that doctors are deliberately misinformed by profit-seeking pharmaceutical companies that casually withhold information about drug efficacy and side effects, explaining the process of pharmaceutical data manipulation and its global consequences. By the best-selling author of *Bad Science*.

The most effective way to decrease women's risk of becoming a breast cancer patient is to avoid attending screening. Mammography screening is one of the greatest controversies in healthcare, and the extent to which some scientists have sacrificed sound scientific principles in order to arrive at politically acceptable results in their research is extraordinary. In contrast, neutral observers increasingly find that the benefit has been much oversold and that the harms are much greater than previously believed. This groundbreaking book takes an evidence-based, critical look at the scientific disputes and the information provided to women by governments and cancer charities. It also explains why mammography screening is unlikely to be effective today. All health professionals and members of the public will find these revelations disturbingly illuminating. It will radically transform the way healthcare policy makers view
