Concerning the changing shape of the
university, this book sets out the
social, historical and philosophical

aspects of the current digital transformation of education.

In recent years, the powerful social, cultural and economic changes wrought by digital technology have led many to forecast the end of the university as we know it. This book employs extensive research and case studies to explain why these predictions, even if perhaps somewhat premature, are on solid ground. The Digital Revolution and the Coming of the Postmodern University shows how the internet, high-speed electronic communications and personal computers necessitate a radical rethinking of what is meant by 'higher education'. The book calls into question both the traditionalist's scepticism about the benefits of new technology, and the corporate e-

learning advocate's failure to grasp that education is more than what happens on a computer screen. The author provides concrete data and models for more democratic, restructured systems of instruction that not only take advantage of advanced learning technologies, but promote the globalisation of higher education. This is an essential read for anyone concerned about the future of higher education.

'The New Inquisitions' begins with early Christianity, and traces heretic-hunting as a phenomenon through the middle ages and right into the 20th century, showing how the same inquisitional modes of thought recur both on the political Left and on the political Right.

"This book presents practical conversations with philosophical and theoretical concerns regarding the use of digital technologies in the educational process, challenging the assumption that information accessibility is synonymous with learning"--

Today, all librarians face daunting challenges posed by trends in technology, publishing, and education as the impact of a globalising information economy forces a rethink of both library strategic directions and everyday library operations. This book brings together the main issues and dilemmas facing libraries; the book clearly shows how to deal with them, and provides a best-practice guide to the solutions. Provides analysis of recent trends and relevant and viable

solutions to problems facing all librarians Written by a highly knowledgeable and well-respected practitioner in the field Draws on the author's international and practical experience in libraries and experience of leading-edge developments in the field

Steve Wilkens edits a debate between three different understandings of the relationship between faith and reason, between theology and philosophy. The three views include: Faith and Philosophy in Tension, Faith Seeking Understanding and the Thomistic Synthesis. This introduction to a timeless quandary is an essential resource for students.

Emerging technologies are becoming more prevalent in global classrooms.

Traditional literacy pedagogies are shifting toward game-based pedagogy, addressing 21st century learners. Therefore, within this context there remains a need to study strategies to engage learners in meaning-making with some element of virtual design. Technology supports the universal design learning framework because it can increase the access to meaningful engagement in learning and reduce barriers. The Handbook of Research on Acquiring 21st Century Literacy Skills Through Game-Based Learning provides theoretical frameworks and empirical research findings in digital technology and multimodal ways of acquiring literacy skills in the 21st century. This book gains a better understanding of how technology can support leaner frameworks and highlights research on discovering new

pedagogical boundaries by focusing on ways that the youth learn from digital sources such as video games. Covering topics such as elementary literacy learning, indigenous games, and student-worker training, this book is an essential resource for educators in K-12 and higher education, school administrators, academicians, pre-service teachers, game developers, researchers, and libraries.

University ethics is everyone's business, and big business is what the university is all about whether in the US, Europe or the rest of the world. How this has come about is less important than that it has, and is being taken very seriously by global and national forces. The important issue confronting higher education is its assumed role in guaranteeing

economic prosperity. Governments are no longer content to let research leak out serendipitously into the economy. The Post-Industrial Society, Information Society, Knowledge Economy and Smart Economy require nothing less than commercially directed research producing innovatory products. The public interest is reduced to economic measures. The political, social and moral implications of changing practices in the university are rarely acknowledged in the rise of the New Alchemy. This book examines the resulting ambiguities and questionable evidence in favour of current polices.

The 1960s and the 1970s marked a generational shift in architectural discourse at a time when the revolts inside universities condemned the

academic institution as a major force behind the perpetuation of a controlling society. Focusing on the crisis and reform of higher education in Italy, The University as a Settlement Principle investigates how university design became a lens for architects to interpret a complex historical moment that was marked by the construction of an unprecedented number of new campuses worldwide. Implicitly drawing parallels with the contemporary condition of the university under a regime of knowledge commodification, it reviews the vision proposed by architects such as Vittorio Gregotti, Giuseppe Samonà, Archizoom, Giancarlo De Carlo, and Guido Canella, among others, to challenge the university as a bureaucratic and self-contained entity, and defend, instead, the role of higher

education as an agent for restructuring vast territories. Through their projects, the book discusses a most fertile and heroic moment of Italian architectural discourse and argues for a reconsideration of architecture's obligation to question the status quo. This work will be of interest to postgraduate researchers and academics in architectural theory and history, campus design, planning theory, and history.

Distance learning is becoming increasingly prevalent in educational settings around the world as it provides more flexibility and access to classes for students and educators alike. While online classrooms are proving to be popular, there is a significant gap in the personalization and humanization of these courses.

The Handbook of Research on Humanizing the Distance Learning Experience features empirical research on promoting the personalization of online learning courses through presence, emotionality, and interactivity within digital classrooms. Highlighting best practices and evaluating student perceptions on distance learning, this handbook will appeal to researchers, educators, course designers, professionals, and administrators.
