Exadata Performance, Yes You Still Need to Tune

Exadata performance can be broken into a couple subsets. ☐ Cell Offloading o Smart Scan o Storage Indexes o Hybrid Columnar Compression ☐ DBRM/IORM ☐ Smart Flash Cache ☐ Additional views to monitor and query Cell offloading or just offloading is the generic term to describe what is now being done at the storage tier that would have been done at the database tier before Exadata.

Oracle Exadata Performance - cdn.swcdn.net
Exadata's extreme performance ensures such events will be absorbed by the system, reducing the likelihood that response times or throughput metrics will violate the standards you've negotiated with your end users. So, to me, it's obvious that performance does matter. Think about what you can do with an extreme performance database

the main Exadata performance monitoring tools and information sources: Automatic Workload Repository (AWR) AWR is the integrated performance diagnostic tool built into Oracle Database.

Monitoring Exadata - Oracle Help Center

Beyond redo writes and large writes (especially for TEMP processing), the Oracle database on Exadata can still gain performance through use of write-back Flash Cache. Use of Write-back Flash Cache requires that ALL mirror copies are cached, meaning that TWO copies of each write are stored in Flash Cache with NORMAL redundancy, or THREE copies are stored in Flash Cache with HIGH redundancy.
