Under lateral fluoroscopic guidance, the atlantoaxial subluxation is gently reduced, and the head is fixed in place. A conventional midline occiput to C3 exposure is performed so that the C1 and C2 lateral masses and the C1 – C2 and C2 – C3 facet joints are revealed. The DRA is attached to the C2 spinous process.

Fluoroscopic Image-Guided Spine Surgery | Neupsy Key

Fluoroscopy-guided lumbar puncture (LP) is a minimally invasive, image-guided diagnostic and therapeutic procedure that involves the removal of a small volume of cerebrospinal fluid (CSF) from, or an injection of medication or other substance (e.g. radiotracer, chemotherapy agents) into the lumbar cistern of the spinal column. In addition to improving success rates,

injection

Fluoroscopy is an imaging technique that uses X-rays to obtain real-time moving images of the interior of an object. In its primary application of medical imaging, a fluoroscope allows a physician to see the internal structure and function of a patient, so that the pumping action of the heart or the motion of swallowing, for example, can be watched. This is useful for both diagnosis

and therapy and occurs in general radiology, interventional radiology, and image-guided surgery. In its simplest f

Fluoroscopy - Wikipedia

Position the patient in a basic supine position so that the bottom of the c-arm can go under the table below the knee. Bend the knees roughly 90 degrees and put a roll under it so the patient ' s legs can stay relaxed. This opens up the joint space a bit. Having someone help hold the patient ' s foot can be helpful.
