Published in Indonesia in 2005, The Rainbow Troops, Andrea Hirata's closely autobiographical debut novel, sold more than five million copies, shattering records. Now it promises to captivate audiences around the globe. Ikal is a student at the poorest village school on the Indonesian island of Belitung, where graduating from sixth grade is considered a remarkable achievement. His school is under constant threat of closure. In fact, Ikal and his friends—a group nicknamed the Rainbow Troops—face threats from every angle: skeptical government officials, greedy corporations hardly distinguishable from the colonialism they've replaced, deepening poverty and crumbling infrastructure, and their own low self-confidence. But the students also have hope, which comes in the form of two extraordinary teachers, and Ikal's education in and out of the classroom is an uplifting one. We root for him and his friends as they defy the island's powerful tin mine officials. We meet his first love, the unseen girl who sells chalk from behind a shop screen, whose pretty hands capture Ikal's heart. We cheer for Lintang, the class's barefoot math genius, as he bests the students of the mining corporation's school in an academic challenge. Above all, we gain an intimate acquaintance with the customs and people of the world's largest Muslim society. This is classic storytelling in the spirit of Khaled Hosseini's The Kite Runner: an engrossing depiction of a milieu we have never encountered before, bursting with charm and verve.

This is a study of the management problems experienced by selected metropolitan cities in South and East Asia and of the approaches adopted in resolving them. Although the region contains many of the world's developing countries, it is not an exception to the universal trends in urbanization, which have had a massive impact on its metropolitan cities. Apart from Tokyo, the cities concerned tend to dominate the economic and political scene in their respective countries, but for the purposes of this discussion it is not inappropriate to refer to them and the problems they face as being broadly metropolitan. Urban geographers and planners now tend to use the term 'metropolitan' to refer to a large identifiable area of continuous urbanization consisting of several administrative jurisdictions. Demographers today often classify cities with populations of more than one million people as metropolitan, and in common usage the term is widely employed to symbolize social, economic, and political status. All of these characteristics apply to the cities studied here.

A thorough presentation of analytical methods for characterizing soil chemical properties and processes, Methods, Part 3 includes chapters on Fourier transform infrared, Raman, electron spin resonance, x-ray photoelectron, and x-ray absorption fine structure spectroscopies, and more.

The best single reference for both the theory and practice of soil physical measurements, Methods, Part 4 adopts a more hierarchical approach to allow readers to easily find their specific topic or measurement of interest. As such it is divided into eight main chapters on soil sampling and statistics, the solid, solution, and gas phases, soil heat, solute transport, multi-fluid flow, and erosion. More than 100 world experts contribute detailed sections.
