Kurt Gödel - Wikipedia

Kurt Friedrich Gödel (b. 1906, d. 1978) was one of the principal founders of the modern, metamathematical era in mathematical logic. He is widely known for his Incompleteness Theorems, which are among the handful of landmark theorems in twentieth century mathematics, but his work touched every field of mathematical logic, if it was not in most cases their original stimulus.

In 1931, the Austrian logician Kurt Gödel pulled off
arguably one of the most stunning intellectual
achievements in history. Mathematicians of the era
sought a solid foundation for mathematics: a set of
basic mathematical facts, or axioms, that was both
consistent — never leading to contradictions — and
complete, serving as the building blocks of all
