FRACTIONAL FACTORIAL DESIGNS Sometimes, there aren't enough resources to run a Full Factorial Design. Instead, you can run a fraction of the total # of treatments. $2k-p$ design = k factors, each with 2 levels, but run only $2-p$ treatments (as opposed to $2k$) $24-1$ design = 4 factors, but run only 23 = 8 treatments (instead of 16) $8/16 = 1/2$ design known as a "1/2 replicate" or "half ...

HOW TO USE MINITAB

Use Response Optimizer to identify the combination of input variable settings that optimize a single response or a set of responses. Minitab calculates an optimal solution and draws an optimization plot. This interactive plot allows you to change the input variable settings to perform sensitivity analyses and possibly improve upon the initial solution.
