Passer's Psychology: Frontiers and Applications is a very well-known and respected market leading Introductory Psychology resource in Canadian Universities. The Canadian author team - led by Mike Atkinson - is dynamic, student focused, and eager to share their love of Psychology with students. Psychology: Frontiers and Applications is a thoughtfully integrated book and multimedia package that strikes just the right balance between student friendliness and scientific integrity--a teaching tool that introduces students to psychology as a science, while highlighting its relevance to their lives and society. All of this is done within a conceptual framework that emphasizes relations between biological, psychological, and environmental levels of analysis.

Passer, Psychology: Frontiers and Applications, 7th Canadian Edition dives deep into the science of psychology while exploring how students can apply concepts in their lives and society. The 7th Canadian Edition is led by Dr. Mike Atkinson, Associate Professor of Psychology at Western University and winner of numerous awards, including the prestigious 3M Canada Teaching Fellowship. Passer is a student-friendly resource that also maintains scientific integrity. The new edition preserves its tradition of emphasizing relations between biological, psychological, and environmental levels of analysis. Passer offers McGraw-Hill Connect, an award-winning digital teaching and learning solution that empowers students to achieve better outcomes and enables instructors to improve course management efficiency. This resource is ideal for degree-level Introductory Psychology courses, or for any learner eager to explore the science of psychology.

Keyed to the material, problem-based learning, and directed questions in the text margin, the Study Guide contains helpful diagrams, a chapter overview and outline, key words and key people matching exercises, a chance to apply concepts, and practice chapter tests. In addition, the Study Guide includes a practice midterm and final!

Leon Festinger's forty-year scrutiny of that "curious animal, the modern human being" fundamentally transformed psychological thinking and shaped an entire scientific field, that of social psychology. The twenty-four papers brought together for the first time in Extending Psychological Frontiers encompass the classic contributions and critical turning points of Festinger's long career. Spanning the post-war decades, this unprecedented volume reveals the full scope, diversity, and import of Festinger's work. Its thematic arrangement clarifies the complex network of problems that preoccupied Festinger and the unique imaginative style that characterized his intellect. Whether examining the voting behavior of Catholics and Jews, the meaning of minute eye movements, the decisions of maze-running rats, or the proselytizing behavior of cultists, Festinger consistently transcended the traditional bounds of the discipline. His theory of cognitive dissonance, which describes how people attempt to resolve the tensions that result when they hold simultaneously two inconsistent beliefs, challenged preexisting psychological theories and produced more important ideas and experimentation than any other development in social psychology. Major writings on group dynamics, decision making, and perceptual processes further underscore the impact of Festinger's research not only on psychology, but also on a wide range of intellectual fronts, from literary theory to ethnology and from historical studies to contemporary political analysis. Extending Psychological Frontiers is an invaluable resource, providing a comprehensive and coherent picture of an extraordinary body of work.

Decision Neuroscience addresses fundamental questions about how the brain makes perceptual, value-based, and more complex decisions in non-social and social contexts. This book presents compelling neuroimaging, electrophysiological, lesional, and neurocomputational models in combination with hormonal and genetic approaches, which have led to a clearer understanding of the neural mechanisms behind how the brain makes decisions. The five parts of the book address distinct but inter-related topics and are designed to serve both as classroom introductions to major subareas in decision neuroscience and as advanced syntheses of all that has been accomplished in the last decade. Part I is devoted to anatomical, neurophysiological, pharmacological, and optogenetics animal studies on reinforcement-guided decision making, such as the representation of instructions, expectations, and outcomes; the updating of action values; and the evaluation process guiding choices between prospective rewards. Part II covers the topic of the neural representations of motivation, perceptual decision making, and value-based decision making in humans, combining neurocomputational models and brain imaging studies. Part III focuses on the rapidly developing field of social decision neuroscience, integrating recent mechanistic understanding of social decisions in both non-human primates and humans. Part IV covers clinical aspects involving disorders of decision making that link together basic research areas including systems, cognitive, and clinical neuroscience; this part examines dysfunctions of decision making in neurological and psychiatric disorders, such as Parkinson's disease, schizophrenia, behavioral addictions, and focal brain lesions. Part V focuses on the roles of various hormones (cortisol, oxytocin, ghrelin/leptine) and genes that underlie inter-individual differences observed with stress, food choices, and social decision-making processes. The volume is essential reading for anyone interested in decision making neuroscience. With contributions that are forward-looking assessments of the current and future issues faced by researchers, Decision Neuroscience is essential reading for anyone interested in decision-making neuroscience. Provides comprehensive coverage of approaches to studying individual and social decision neuroscience, including primate neurophysiology, brain imaging in healthy humans and in various disorders, and genetic and hormonal influences on decision making Covers multiple levels of analysis, from molecular mechanisms to neural-systems dynamics and computational models of how we make choices Discusses clinical implications of process dysfunctions, including schizophrenia, Parkinson's disease, eating disorders, drug addiction, and pathological gambling Features chapters from top international researchers in the field and full-color presentation throughout with numerous illustrations to highlight key concepts

An examination of forensic and criminal psychology that examines psychological research and theory and its practical relevance to understanding events in courts of law and the psychological processes involved in the judicial system. It includes case studies, boxed sections on key studies and researchers. The text covers both forensic and criminal psychology in the same volume with the emphasis on areas of debate and controversy to promote reader interaction. It provides comprehensive details of the conceptual background to the field and includes international examples of forensic practices while drawing upon a wide variety of psychology specialisms.

For decades, the field of gender, sex, and sexualities has been a focal point of increasing interest. This inquiry has been ignited by successive waves of dramatic social change, chief among them: the re-emergence of feminist movements in the U.S. and Europe in the late 1960s; the sustained (and increasingly successful) bids for legal, social, and religious acceptance of non-heterosexual sexualities in many parts of the world; and the burgeoning number of people (whether cisgendered, gender-variant, trans, or questioning) whose individual and collective experiences of gender and sexuality warrant deeper understanding and further progress toward a fuller realization of human potential and civil rights. In psychology, the intellectual project of understanding gender, sex, and sexualities encompasses a variety of subfields spanning neuroscience and developmental, cognitive, social, and cultural psychology, as well as critical theory. As such, these approaches have inspired new and different psychological questions, as well as increased interest in previously unfamiliar topics of investigation. Edited by Nancy K. Dess, Jeanne Marecek, and Leslie C. Bell, Gender, Sex, and Sexualities offers both students and scholars the tools they need to consider and approach such questions as: how do children come to embrace (or repudiate) gendered activities and identities; how do people experience intimacy, desire, and sexual arousal; and what strategies can psychologists use to de-center their own points of view and effectively contribute to a decolonial psychology? As a result, this volume will open new avenues of inquiry as well as cross-disciplinary conversations for readers everywhere.
