Life Sciences presents the core concepts of physical chemistry with mathematical rigor and conceptual clarity, and develops the modern biological applications alongside the physical principles. The traditional presentations of physical chemistry are augmented with material that makes these chemical ideas biologically relevant, applying physical principles to the understanding of the complex problems of 21st century biology.

lies at the heart of the behaviour of those macromolecules and molecular assemblies that have vital roles in all living organisms. Physical principles determine the stability of proteins and nucleic acids, the rate at which biochemical reactions proceed, the transport of molecules across biological membranes; they allow us to describe structure and reactivity in complex biological systems, and make sense of how these systems operate.
