Several internal and external factors have been identified to estimate and control the psycho-biological stress of training in order to optimize training responses and to avoid fatigue, overtraining and other undesirable health effects of an athlete. An increasing number of lightweight sensor-based wearable technologies ( " wearables " ) have entered the sports technology market. Non-invasive sensor-based wearable technologies could transmit physical, physiological and biological data to computing platform and may provide through human-machine interaction (smart watch, smartphone, tablet) bio-feedback of various parameters for training load management and health. However, in theory, several wearable technologies may assist to control training load but the assessment of accuracy, reliability, validity, usability and practical relevance of new upcoming technologies for the management of training load is paramount for optimal adaptation and health.

One of a series of studies on vocational education and training, this review focuses on the apprenticeship system in England and concludes with policy recommendations.

This timely volume opens a window on issues related to English language education in Vietnam. The authors consider that teacher quality is the key factor to be considered if the national English language curriculum outcomes are to be achievable. Aiming to shed light on key issues recently observed in the Vietnamese landscape of English language education, it examines the complexity of the institutionalization of the standardized English proficiency policy, which has been in force since 2008. That policy uses the Common European Framework of References for Languages (CEFR) as the model to set the standards and levels of proficiency for teachers, learners and state employees. The book presents both the theoretical and practical aspects of the standardization movement in English language education. The contents comprise a series of extended research-based chapters written by experts of language-in-education policy and planning in and about Vietnam from a range of perspectives including teachers, English language curriculum developers, teacher educators and researchers. The rich coverage of the book includes current discussion on English language education in Vietnam ranging from policy to practice, making it highly relevant to English teachers, teacher educators, and scholars, in Vietnam and worldwide, who aspire to broaden their horizons and professionalism.

Contemporary societies are constructed, constricted, and constrained by various series of examinations. Governments of both Western and non-Western countries tend to conduct detailed, multi-layered and continuous systems of tests or examinations. International tests, such as PISA and TIMSS, have also been introduced to compare the relative performances of learners within diverse educational institutions across different countries. Examinations therefore provide a methodological pivot for comparing a range of societies. They enable us to contrast the West and the East; the North and the South; tribal and mass society; ancient and postmodern civilization; and so on. Comparing parallel societies from across Asia, the Middle East, Europe, and North America, this book proposes fundamental transitions in sociological research from system to process and from communication to composition through intensive studies on examinations. It uses ethnographies, interviews, questionnaires, documents, statistics, and big-data analyses to make comparisons on broad scales of time and space. In so doing, it suggests hypotheses encompassing different kinds of societies in human history, including those in the Axial Age and the Modern Ages.

Biological engagement programs are a set of projects or activities between partner countries that strengthen global health security to achieve mutually beneficial outcomes. Engagement programs are an effective way to work collaboratively towards a common threat reduction goal, usually with a strong focus on strengthening health systems and making the world a safer place. Cooperative programs are built upon trust and sharing of information and resources to increase the capacity and capabilities of partner countries. Biological engagement programs reduce the threat of infectious disease with a focus on pathogens of security concern, such as those pathogens identified by the U.S. Government as Biological Select Agent and Toxins. These programs seek to develop technical or scientific relationships between countries to combat infectious diseases both in humans and animals. Through laboratory biorisk management, diagnostics, pathogen detection, biosurveillance and countermeasure development for infectious diseases, deep relationships are fostered between countries. Biological engagement programs are designed to address dual-use issues in pathogen research by promoting responsible science methodologies and cultures. Scientific collaboration is a core mechanism for engagement: programs are designed to strengthen global health security, including prevention of avoidable epidemics; detection of threats as early as possible; and rapid and effective outbreak response. This Research Topic discusses Biological Engagement Programs, highlighting the successes and challenges of these cooperative programs. Articles in this topic outlined established engagement programs as well as described what has been learned from historical cooperative engagement programs not focused on infectious diseases. Articles in this topic highlighted selected research, trainings, and programs in Biological Engagement Programs from around the world. This Topic eBook first delves into Policies and Lessons Learned; then describes Initiatives in Biosafety & Biosecurity; the core of this work documents Cooperative Research Results from the field; then lastly the Topic lays out potential Future Directions to the continued success of the World's cooperative science in reducing the threat of infectious diseases.

Building on past OECD work on early childhood education and care, and drawing on the experience of OECD countries, this report outlines good practice policy measures for improving jobs in ECEC and for constructing a high-quality workforce.

This book provides new ideas on how to work with and constructively transform shame on a theoretical and practical level, and in various socio-cultural contexts and professions. It provides practical guidelines on dealing with shame on the basis of reflection, counselling models, exercises, simulations, specific psychotherapeutic approaches, and auto-didactical learning material, so as to transform shame from a negatively experienced emotion into a mental health resource. The book challenges theorists to adopt an interdisciplinary stance and to think "outside the box." Further, it provides practitioners, such as coaches, counsellors, therapists, trainers and medical personnel, with practical tools for transforming negative experiences and emotions. In brief, the book shows practitioners how to unlock the growth potential of individuals, teams, and organisations, allowing them to develop constructively and positively.

The content of medical education knowledge transfer is compounded as medical breakthroughs constantly impact treatment, and new diseases are discovered at an increasingly rapid pace. While much of the knowledge transfer remains unchanged throughout the generations, there are unique hallmarks to this generation's education, ranging from the impact of technology on learning formats to the use of standardized patients and virtual reality in the classroom. The Handbook of Research on the Efficacy of Training Programs and Systems in Medical Education is an essential reference source that focuses on key considerations in medical curriculum and content delivery and features new methods of knowledge and skill transfer. Featuring research on topics such as the generational workforce, medical accreditation, and professional development, this book is ideally designed for teachers, physicians, learning practitioners, IT consultants, higher education faculty, instructional designers, school administrators, researchers, academicians, and medical students seeking coverage on major and high-profile issues in medical education.
