Characteristics to note in the rubric: Language is descriptive, not evaluative. Labels for degrees of success are descriptive ( “ Expert ” “ Proficient ” , etc.); by avoiding the use of letters representing grades or numbers representing points, there is no implied contract that qualities of the paper will “ add up ” to a specified score or grade or that all dimensions are of equal grading value.

Abnormal Psychology could not have been written a decade ago. The collaborative effort of a clinical psychologist (Rosenberg) and a cognitive neuroscientist (Kosslyn) provides students with a fascinating, progressive, and modern view of how psychopathology is studied, understood, experienced, and treated today. Like no other text, it integrates the next generation of the biopsychosocial approach by including what we have learned about the brain and its role in psychological disorders. This new neuropsychological approach shows the dynamic interplay between the neurological, psychological, and social factors involved in understanding psychological disorders and their treatment. Equally important, Rosenberg and Kosslyn include captivating clinical material that puts a human face on psychological disorders. The text includes page after page of riveting case studies, examples, quotes, and critical thinking exercises. By combining the neuropsychosocial approach with rich clinical material, students are provided with the “ big picture ” of abnormal psychology so they can understand and remember it, and apply it to the world around them.

This engaging text shows students what markers look for in their work and helps them to develop the skills they need to produce a first-class essay. It focuses on all the core elements of effective essay writing, including devising a question, critical thinking, engaging with the literature and structuring an essay. Chapters include clear and concise guidance on meeting marking criteria, illustrated with real students’ essays from a range of disciplines, and activities which encourage students to put their new skills into practice. This is an essential resource for all university students for whom essays and coursework form part of their assessment. It is also ideal for further education students and those preparing for university-level study.

Updated to align with the American Psychological Association and the National Council of Accreditation of Teacher Education accreditation requirements. Focused on increasing the credibility of research and evaluation, the Fifth Edition of Research and Evaluation in Education and Psychology: Integrating Diversity with Quantitative, Qualitative, and Mixed Methods incorporates the viewpoints of various research paradigms into its descriptions of these methods. Students will learn to identify, evaluate, and practice good research, with special emphasis on conducting research in culturally complex communities, based on the perspectives of women, LGBTQ communities, ethnic/racial minorities, and people with disabilities. In each chapter, Dr. Donna M. Mertens carefully explains a step of the research process—from the literature review to analysis and reporting—and includes a sample study and abstract to illustrate the concepts discussed. The new edition includes over 30 new research studies and contemporary examples to demonstrate research methods including: Black girls and school discipline: The complexities of being overrepresented and understudied (Annamma, S.A., Anyon, Y., Joseph, N.M., Farrar, J., Greer, E., Downing, B., & Simmons, J.) Learning Cooperatively under Challenging Circumstances: Cooperation among Students in High-Risk Contexts in El Salvador (Christine Schmalenbach) Replicated Evidence of Racial and Ethnic Disparities in Disability Identification in U.S. Schools (Morgan, et. al.) Relation of white-matter microstructure to reading ability and disability in beginning readers (Christodoulou, et. al.) Arts and mixed methods research: an innovative methodological merger (Archibald, M.M. & Gerber, N.)

A guide to an evidence-based approach for teaching college-level psychology courses Teaching Psychology offers an evidence-based, student-centered approach that is filled with suggestions, ideas, and practices for teaching college-level courses in ways that contribute to student success. The authors draw on current scientific studies of learning, memory, and development, with specific emphasis on classroom studies. The authors offer practical advice for applying scholarly research to teaching in ways that maximize student learning and personal growth. The authors endorse the use of backward course design, emphasizing the importance of identifying learning goals (encompassing skills and knowledge) and how to assess them, before developing the appropriate curriculum for achieving these goals. Recognizing the diversity of today’s student population, this book offers guidance for culturally responsive, ethical teaching. The text explores techniques for teaching critical thinking, qualitative and quantitative reasoning, written and oral communication, information and technology literacy, and collaboration and teamwork. The authors explain how to envision the learning objectives teachers want their students to achieve and advise how to select assessments to evaluate if the learning objectives are being met. This important resource: Offers an evidence-based approach designed to help graduate students and new instructors embrace a student-centered approach to teaching; Contains a wealth of examples of effective student-centered teaching techniques; Surveys current findings from the Scholarship of Teaching and Learning; Draws on the American Psychological Association’s five broad goals for the undergraduate Psychology major and shows how to help students build life-long skills; and, Introduces Universal Design for Learning as a framework to support diverse learners. Teaching Psychology offers an essential guide to evidence-based teaching and provides practical advice for becoming an effective teacher. This book is designed to help graduate students, new instructors, and those wanting to update their teaching methods. It is likely to be particularly useful for instructors in psychology and other social science disciplines.

Rosenberg and Kosslyn’s Abnormal Psychology brings students to the very forefront of the study of the brain and its role in psychological disorders. Now that text returns in a new edition that again matches the latest research from neuroscience to culture-based approaches with riveting human examples, helping your students understand the both the scientific foundations and the personal impact of mental illness. The new edition also brings forward the books distinctive emphasis on the dynamic interplay between the neurological, psychological, and social factors involved in understanding psychological disorders and their treatment. A Superb Author Team An experienced teacher, author, and practicing clinical psychologist, Robin Rosenberg is also an expert at using pop culture to examine psychological concepts (you can see her work in Slate magazine, Whats the Matter with Batman?). Stephen Kosslyn is a renowned neuroscientist, formerly of Harvard and Stanford and now founding Dean at the Minerva Project (a new start-up university), and an accomplished communicator for undergraduate and general audiences.

Why have people from different cultures and eras formulated myths and stories with similar structures? What does this similarity tell us about the mind, morality, and structure of the world itself? From the author of 12 Rules for Life: An Antidote to Chaos comes a provocative hypothesis that explores the connection between what modern neuropsychology tells us about the brain and what rituals, myths, and religious stories have long narrated. A cutting-edge work that brings together neuropsychology, cognitive science, and Freudian and Jungian approaches to mythology and narrative, Maps of Meaning presents a rich theory that makes the wisdom and meaning of myth accessible to the critical modern mind.
