Originally devised as a guide for converting from imperial to metric measurements, 'The Metric Handbook' has since been totally transformed into a major international handbook of planning and design data. The second edition has been completely updated, with most chapters being totally rewritten, to meet the needs of the modern designer. The book contains nearly 50 chapters dealing with all the principal building types from airports, factories and warehouses, offices shops and hospitals, to schools, religious buildings and libraries. For each building type 'The Metric Handbook' gives the basic design requirements and all the principal dimensional data. Several chapters deal with general aspects of building such as materials, lighting, acoustics and tropical design. There are also sections on general design

building types from airports, factories and warehouses, offices shops and hospitals, to schools, religious buildings and libraries. For each type the book gives the basic design requirements and all the principal dimensional data, as well as succinct guidance on how to use the information and what regulations the designer may need to be aware of. As well as buildings the Metric Handbook deals with broader aspects of design such as materials, acoustics and lighting, and general design data on human dimensions and space requirements. The Metric Handbook is a unique authoritative reference for solving everyday planning problems. It has sold well over 100,000 copies worldwide to successive generations of architects and designers – this is a book that truly belongs on every design office desk and drawing board.

Concussion -- the biggest name in today's high-impact sports. As more and more high profile athletes come forward to share their stories of invisible suffering after head injuries, we as a culture are finally acknowledging this silent epidemic. The Concussion Repair Manual is written as a user's guide for those suffering after head traumas and those that support them. It is one-part "textbook," packed with the leading research on medical technologies for healing the injured brain, and one-part "workbook," offering a step-by-step method for making and tracking a personalized recovery regimen. Dr. Dan Engle's background and passion for concussion repair stem from a three-decade investigation into the many modalities for healing his own traumas. When the usual medical treatments didn't help, he explored

what was possible, found what worked and put them into this manual - "the best of the best" in the medical arena for recovering from sports related head injury.

A time-saving device intended for designers and architects. The CD uses illustrations from the 1998 edition of the Metric handbook to provide CAD drawings, information and tools. The illustrations are suitable for AutoCAD R11, R12, R13 and will work using AUtodesk and similar CAD systems.
