A study of the relationship between environmental cooperation and state building in post-Soviet Central Asia.

A study of the relationship between environmental cooperation and state building in post-Soviet Central Asia.

This book makes two central claims: first, that mineral-rich states are cursed not by their wealth but, rather, by the ownership structure they choose to manage their mineral wealth and second, that weak institutions are not inevitable in mineral-rich states. Each represents a significant departure from the conventional resource curse literature, which has treated ownership structure as a constant across time and space and has presumed that mineral-rich countries are incapable of either building or sustaining strong institutions - particularly fiscal regimes. The experience of the five petroleum-rich Soviet successor states (Azerbaijan, Kazakhstan, the Russian Federation, Turkmenistan, and Uzbekistan) provides a clear challenge to both of these assumptions. Their respective developmental trajectories since independence demonstrate not only that ownership structure can vary even across countries that share the same institutional legacy but also that this variation helps to explain the divergence in their subsequent fiscal regimes.

Many environmental problems cross national boundaries and can be addressed only through international cooperation. In this book Robert Darst examines transnational efforts to promote environmental protection in the USSR and in five of its successor states—Russia, Ukraine, and the Baltic republics of Estonia, Latvia, and Lithuania—from the late 1960s to the present. The core of the book is a comparative study of three key issues: nuclear power safety, transboundary air pollution, and Baltic Sea pollution. Although expectations were high that the end of the Cold War and the breakup of the Soviet Union would lead to increased East-West environmental cooperation, the opposite has been true. Russia and the other successor states have generally agreed to address such problems only when paid to do so. Darst finds that post-Cold War environmental cooperation has been most successful when there is an overlap between the environmental and economic interests of the successor states and those of their Western neighbors, and when the foundation for cooperation was laid during the Cold War period. The book is based on extensive original field research, including interviews with diplomats, government officials, scientists, and environmental activists in the successor states and Western Europe. Its findings underscore the importance of the domestic and international political

# Online Library State Making And Environmental Cooperation Linking Domestic And International Politics In Central Asia Global context in which international environmental policy making occurs. It also deepens our understanding of the opportunities and dangers of positive inducements as a tool of international environmental policy.

An argument that resource scarcity and environmental degradation can provide an impetus for cooperation among countries. Common wisdom holds that the earth's dwindling natural resources and increasing environmental degradation will inevitably lead to inter-state conflict, and possibly even set off "resource wars." Many scholars and policymakers have considered the environmental roots of violent conflict and instability, but little attention has been paid to the idea that scarcity and degradation may actually play a role in fostering inter-state cooperation. Beyond Resource Wars fills this gap, offering a different perspective on the links between environmental problems and inter-state conflict. Although the contributors do not deny that resource scarcity and environmental degradation may become sources of contention, they argue that these conditions also provide the impetus for cooperation, coordination, and negotiation between states. The book examines aspects of environmental conflict and cooperation in detail, across a number of natural resources and issues including oil, water, climate change, ocean pollution, and biodiversity conservation. The contributors argue that increasing scarcity and degradation generally induce cooperation across states, but when conditions worsen (and a problem becomes too costly or a resource becomes too scarce), cooperation becomes more difficult. Similarly, low levels of scarcity may discourage cooperation because problems seem less urgent. With contributions from scholars in international relations, economics, and political science, Beyond Resource Wars offers a comprehensive and robust investigation of the links among scarcity, environmental degradation, cooperation, and conflict.

This book aims to take stock of the state of environmental degradation in Europe from theoretical and empirical point of views. It focuses on international organizations and institutions in Europe that deal with ecological problems and integrates case studies on regional environmental cooperation.

"It's often claimed that future wars will be fought over water. But while international water conflict is rare, it's common between sub-national jurisdictions like states and provinces. Drawing on cases in the United States, China, India, and France, this book explains why these sub-national water conflicts occur - and how they can be prevented"--

VanDeveer, University of New Hampshire.
