Memorization of the multiplication facts is fun and easy with this colorful and clever book of cartoons and stories. Children learn to associate the numbers with the characters in the story. To teach 4x4, the story tells about Bart who loves to go hang gliding and can't wait until he turns 16 so he can get his driver's license and drive his 4 by 4. Children easily remember once the story is learned. The caption below the story says: Remember: you have to be 16 to drive a 4x4. There are cartoons and stories for all the difficult facts, ie. the 3's, 4's, 6's, 7's, and 8's. Tricks are are used to teach the easier ones ie. 1's, 2's, 5's, and 9's. Kids love the stories and will never forget "You have to be 16 to drive a 4 by 4, (4x4). Over 500,000 copies have been sold to schools in the US since 1992.

Pictures and stories make memorization easy with the Times Tables The Fun Way Activity Book. Number characters in a story interact to cause an outcome which is the answer to the fact. For example, to teach 6 x 6, the story tells of twin sixes crossing the desert, they get low on water becoming thirsty sixes, a word play on 36.

For a child at home or students in a classroom, this 8.5"x11," 244 page resource book is full of reproducible activites to help ALL learners memorize the basic times tables 0-9. Times to Remember is a unique and innovative multi-sensory product. Fast, easy, effective, and fun, the key is found in beautifully illustrated rhymes, created with careful consideration to both visual and auditory learning. Hands-on activities, requiring minimal instruction, also provide kinesthetic learning so that all learners, regardless of learning styles, can celebrate success. Not only is Times to Rememberfun and easy, it takes only minutes for results. It can be presented to an entire classroom, small groups, or individual learners, and is especially effective for students who struggle with rote memorization, including those with special needs. Included are innovative graphic-hint flashcards and quizzes, 21 illustrated rhymes in a trace-and-color format, review pages, games and more. Perfect for parents, grandparents, home school families, teachers, special education and tutors. Combine with Times to Remember Sing-ALong Songs or children's hardcover book for additional fun and learning.

Teach Your Child the Multiplication Tables - 2nd Edition Like most third graders, my son found learning the multiplication tables through rote memorization a challenge. After an afternoon of tiresome drills, I knew there had to be a better way! I drew a grid for tables 1-10. Not surprisingly, Scott knew tables 1, 2, 5 and 10, the tables with easy patterns. Well, then, why not find patterns for the rest of the tables? Tables for EVEN numbers 2, 4, 6 and 8, we discovered, end in some combination of 2-4-6-8-0 and are easy to learn. Tables for ODD numbers, we found, also have distinct patterns. Patterns made Scott smile. He could see the underlying structure and knew he got it right. The traditional method of learning one math fact at a time, such as 8 x 6 = ?, is not only difficult but highly inefficient. Rote memorization is passive and mechanical. Students typically find it boring. Why not learn one pattern for the entire table? Discovering patterns is active, creative and engaging. The essence of mathematics is patterns. Learning to recognize patterns at an early age develops analytical skills. Patterns greatly benefit children with special needs, such as those with ADD/ADHD, autism and dyslexia. They can better recall and visualize the table when they see a pattern. This is true for all children. Patterns aid recall. My workbook utilizes both left and right-brain strategies to teach multiplication. There are marked differences between children who are left-hemisphere dominant and those who are right dominant. Whereas the left-hemisphere dominant child can construct the whole from the parts, the right dominant prefers the big picture, seeing patterns and making connections. Special needs children are often right-brain dominant. Learning the multiplication tables is much easier when both hemispheres are engaged. It is the responsibility of parents and teachers to ensure children learn the multiplication tables. Without them a child will not progress beyond third grade math. Fractions, decimals, percentages and algebra will be beyond a child's reach. In California, the number one reason students do not graduate from high school is failure to pass algebra. A leading cause is: failure to master the times tables! It is a national disgrace that fifteen-year olds in the U.S. rank near the bottom of industrialized nations in math skills. We must reverse this alarming trend. The time to intervene is in the third grade. Teachers, why not a more effective approach to the multiplication tables than the "drill and kill" of rote memorization? Why not bring the "magic" of math into the classroom? If all third graders were to genuinely like math, they would be more likely to succeed in school. Parents too must do their part. Parents have a huge influence over a third grader. By high school it may be too late. Mastery of the multiplication tables is essential to your child's future. The goal of this workbook is not only multiplication mastery for all children but to instill in them a love of numbers and fascination with math. Free instructional TeaCHildMath(tm) videos can be found on YouTube.

Time Tales uses mnemonic stories to trigger the memory when a set of facts are presented. This approach will appeal to visual, auditory and kinesthetic learners.

Rhymes x pictures = times tables made easy! Nine year old Harry Moraghan never found maths easy. Then he discovered he REALLY hated it when it came to learning multiplication tables So Harry's mum invented an ingenious way of remembering his tables by using rhymes and pictures. In two weeks Harry had all his multiplication tables down pat. Soon after, Harry's teacher gave the class a test. Harry finished it in five minutes and got every question right! News of Harry's Magic Tables spread like wildfire in his school. In no time, the book was shared with some lucky classmates, friends, cousins, and eventually complete strangers too! Now many happy children know their tables inside out - and so can you!

The fun, engaging program that will help your child master the addition facts once and for all--without spending hours and hours drilling flash cards!

Learning times tables is a necessity for all children and this book makes it clear, easy and fun to do. Once they have mastered all the numbers in the yellow panels they will know them all!
